

Compliance Setup

- Phase 1 Context Selection does not populate the project details once selected
- Tracker - For the compliance analysis after you add the answers to the questions - For example the **Building Safety requirements** does not show even when you select it. The requirements need to be verified against all the regulations

- **Risk management** - when you answer the questions and run the analysis before it sends you to AI RISK INQUIRY and it shows you this pop up before going to the the ai risk inquiry

- **Project Risk Analysis complete — Salisbury Regeneration - UI/UX needs fixing (new identifications repeats itself and there is an error next to the workflow)**

- **Grant Funding Compliance and Milestone Slippage** NEW IDENTIFICATION ACCEPTED Reset Selection
- FINANCIAL GROSS: 15 (HIGH) SIU7HUYSTTP6MVJ0K6CE - FINANCE + NEW IDENTIFICATION
- Completed the entire checklist and published and it did not save and does not show on the active context/ on My projects and all data not saving - Salisbury Regeneration. It shows on the dashboard but it does not show anything and does not reflect on active context on the left top banner Also the data is not saved for the other projects.

My Task - add task button for manual tasks not showing

Here are potential features for the developer to add to the site, based on the identified issues:

Dashboard view

Portfolio Aggregate shows the overall status of the programme and projects

Programme view shows the overall status of the programme register and compliance posture

Individual project view shows the individual project risks and compliance posture

Dashboard Views and Focus

The dashboard provides distinct levels of oversight:

- **Portfolio Aggregate:** Displays the comprehensive status of all programs and projects.
- **Programme View:** Focuses on the overall status, register, and compliance posture of the programme.
- **Individual Project View:** Details the specific risks and compliance status for each project.

Compliance Setup and Project Management Features:

1. **Automatic Project Details Population:** Implement a feature so that project details (e.g., name, associated data) automatically populate once a "Context Selection" is made in Phase 1 of the Compliance Setup.
2. **Comprehensive Compliance Tracker Verification:** Ensure the Compliance Tracker reliably displays *all* relevant requirements, such as **Building Safety requirements**, once they are selected and answers are added. This verification should cross-reference against all associated regulations.
3. **Reliable Data Saving and Persistence:** Implement robust saving functionality to ensure that:
 - Completed checklists are successfully saved and displayed under "My projects" and the "active context."
 - All data for published projects (e.g., "Salisbury Regeneration") is saved correctly and reflected on the dashboard and in the active context banner.
 - Data for all other projects is consistently saved.

Risk Management and UI/UX Features:

1. **AI Risk Inquiry UX Refinement:** Improve the user experience and interface for the pop-up notification that appears before sending the user to the "AI RISK INQUIRY" after a Risk Management analysis is run.
2. **Project Risk Analysis UI/UX Fixes:**
 - Resolve the issue where "new identifications" repeat themselves in the Project Risk Analysis summary (e.g., "**Project Risk Analysis complete — Salisbury Regeneration**").
 - Fix the error display next to the workstream in the Project Risk Analysis summary.

General Task Management Feature:

1. **"Add Task" Button for Manual Tasks:** Implement the "Add task" button to allow users to manually input and manage tasks.
- 2.
